UBS 2011 Rogue Trading Scandal

From Operational Failure to Treasury Decisions

EXECUTIVE BRIEFING TO THE GROUP CEO AND UBS GROUP EXECUTIVE BOARD

Corporate Treasury Management · 14 Sep–14 Dec 2011

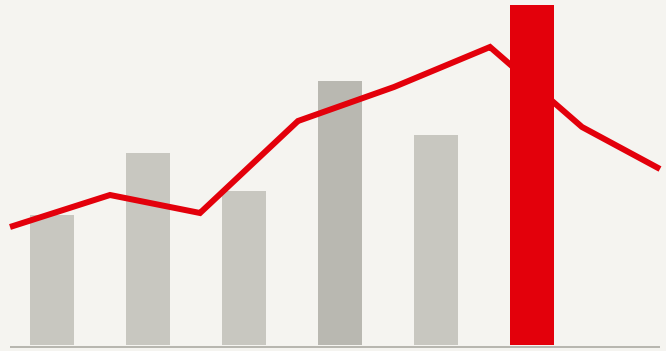

Academic supervisor Jamil Chaftar

Paul Alain Diouf · Calvin Minang · Jules Métayer · Elias Abou-Tayeh

TREASURY DECISION WINDOW

14 September → 14 December 2011

LIQUIDITY HEADROOM · CONCEPT

Protect cash capacity.
Verify exposure. Gate funding.

Source-led case analysis · all modelled cash paths are explicitly labelled, not historical UBS data

Research question, scope and method

CENTRAL QUESTION

How should UBS Treasury meet payment obligations over the three months after concealed trading losses are discovered?

INCIDENT

Unauthorised trading in UBS Investment Bank, London; operational-risk case with immediate Treasury implications.

PERSPECTIVE

Treasury team advising the CFO at discovery—not regulators looking back.

HORIZON

14 Sep–14 Dec 2011; greatest forecast detail in the first days.

Instructor-approved adaptation: use maturity-based bank cash flows and liquidity headroom—not corporate WCR / CCC.

PUBLISHED	UBS disclosures + regulator findings
ASSUMED	Inputs explicitly labelled in the cash model
STRESSED	Sensitivity cases, never presented as historical outcomes

Three parts: (I) incident and cash transmission · (II) cash bridge and funding need · (III) residual risks and CFO actions.

Subsequent disclosures explain the outcome; they are not treated as information Treasury had on 14 September.

Sources: [1] FINMA; [2] FSA. Method separates discovery-date information from later findings.

UBS’s bank cash cycle is governed by timing, currency and location

2011 GROUP CONTEXT Wealth management · Swiss banking · Asset management · Investment Bank

CASE PERIMETER

Kweku Adoboli was a trader on UBS Investment Bank’s London ETF Desk.

RECEIPTS / CASH IN

Customer deposits · loan repayments · fees
Trading settlements due to UBS · funding proceeds

PAYMENTS / CASH OUT

Withdrawals · lending commitments · trade settlements
Collateral · debt maturities · payroll and suppliers

LIQUIDITY ≠ PROFITABILITY ≠ CAPITAL

Liquidity is cash and assets realistically monetisable within the required time. Group cash may be trapped by legal entity, currency, collateral eligibility or transfer delay.

Simplified 2011 bank cash-cycle exhibit. Liquidity resources must be available when and where due.

Real futures exposure was hidden by fictitious offsetting records

14 SEP
UBS discovers Adoboli's unauthorised futures positions

15 SEP
Initial loss estimate ~USD 2.0bn

18 SEP
UBS says risk covered; equities within limits

04 OCT
Revised estimate USD 2.3bn

REAL MARKET POSITION

Long / short index futures with genuine external risk

FALSE BOOK ENTRIES

One-sided internal futures · late bookings
Fictitious deferred-settlement ETFs; no external risk position

APPARENT CONTROL VIEW

Offsets looked real; reported risk / P&L concealed the true exposure

Adoboli · user-supplied image; rights unverified

FINMA-reported gross notional peaks (USD bn; not P&L or net-delta risk)

LONG index futures

12.1bn

8 Aug · peak

SHORT index futures

8.5bn

15 Sep · peak

About USD 2.1bn of the final USD 2.3bn loss came from the long positions.

25 Oct UBS Q3 accounting: CHF 1.951bn total = CHF 1.849bn P&L + CHF 102m translation (~USD 2.229bn).

Sources: [1] FINMA §§11–18; [2] FSA §§23–25; [3] UBS Supplement No. 2; [4] UBS Q3 2011.

Control failures amplified exposure and liquidity pressure

TRADE VERIFICATION

Unmatched / fictitious entries and late bookings were not independently confirmed.

EXCEPTION REVIEW

Material breaks and cancelled / amended / late trades were not investigated promptly.

SUPERVISION & ESCALATION

Desk transfer, limit breaches and fragmented control ownership weakened challenge.

Concealed exposure — **Adverse market moves** — **Settlement / collateral** — **Lower liquidity headroom** — **Funding / confidence stress**

CASH EFFECTS TO TRACK

PERMANENT	Realised trading losses; investigation / remediation expense.
TEMPORARY	Cash settlement and recoverable collateral / delayed receipts, if evidenced.
CONTINGENT	Withdrawals, tighter counterparty terms, funding access; stress scenarios only.

Obligations continue: settlements · withdrawals · debt repayments · payroll · supplier payments. Do not equate the USD 2.3bn loss with day-one cash need.

Sources: [1] FINMA §§23–41; [2] FSA §§26–42. Potential channels are not asserted historical cash movements.

Model setup: one perimeter, USD millions, clear assumptions

PERIMETER

Group cash calendar; ring-fence London Investment Bank exposure. Count assets only if transferable in the right entity and currency by the due date.

ILLUSTRATIVE INPUTS · USDm

Opening cash $1,000m (round-number assumption). Buffer $700m ≈1.13× assumed first-week payments ($621m). Replace with UBS policy.

PUBLISHED

Loss, incident dates, positions, controls

DERIVED

Accounting reconciliation + model arithmetic

ASSUMED

Opening cash, buffer, receipts, payments, FX

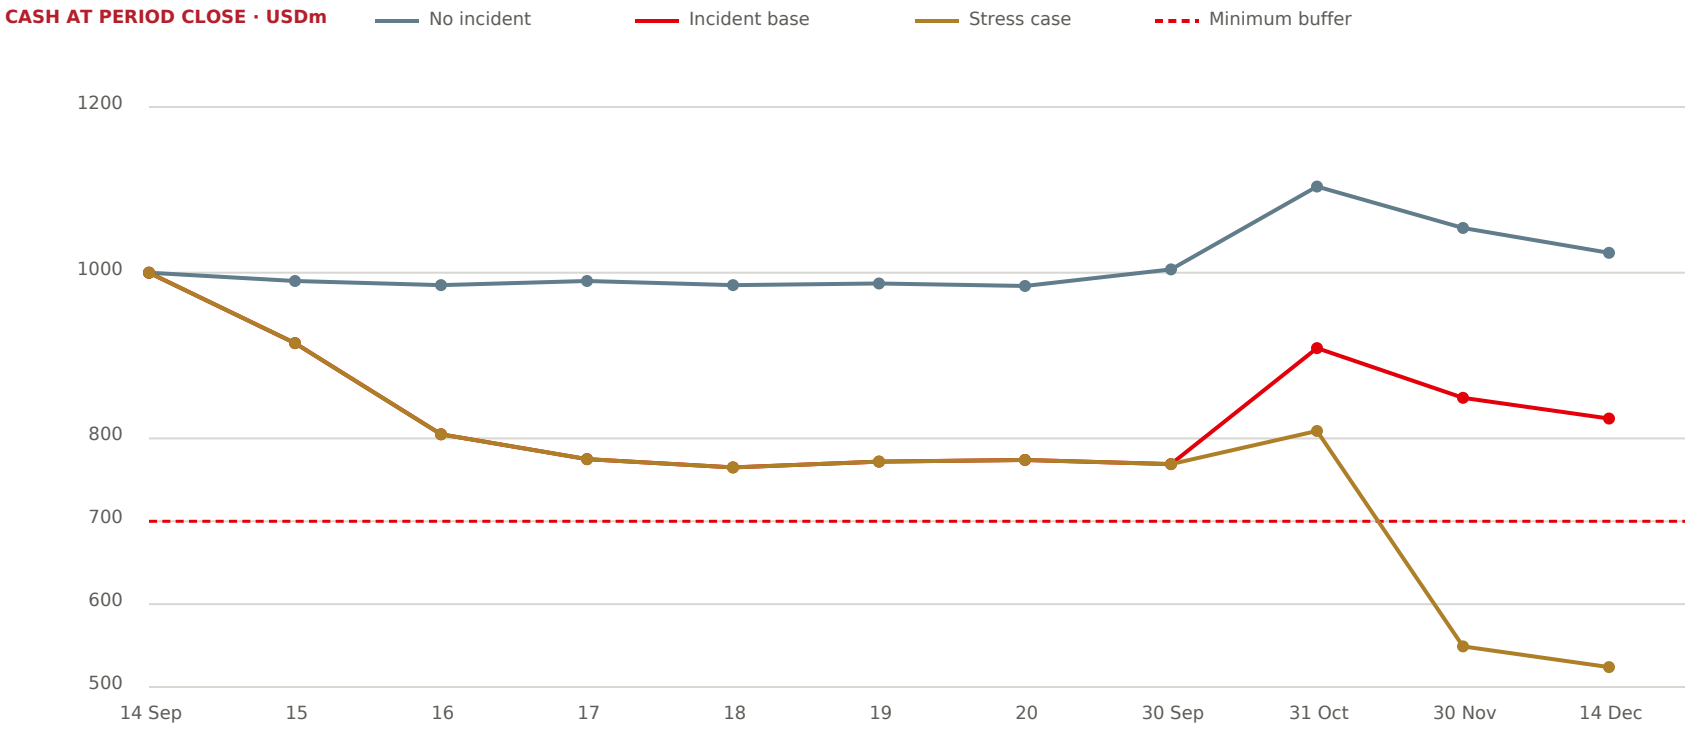

Use maturity-based cash flows and liquidity headroom—not WCR / CCC, which do not fit a bank's deposit, settlement and collateral profile.

MODEL TIMING

Daily 14–20 Sep; weekly after that; monthly roll-up to 14 Dec. In a live CFO forecast, replace assumptions with the approved buffer, dated cash ledger and FX rates.

Classroom cash inputs are illustrative assumptions, not UBS Treasury records; replace with internal data.

Cash path: baseline, incident and stress case

ASSUMED MODEL INPUTS

Opening cash $1,000m
Minimum buffer $700m

BASE CASE

No incident: minimum $984m
Incident: minimum $765m
Funding gap: $0m

STRESS CASE

First buffer breach: 30 Nov
14 Dec cash: $524m
Peak funding need: $176m

Model flows use assumed settlements, collateral, withdrawals and funding timing. Actual opening cash, approved buffer and cash movements require UBS Treasury records.

No double count: loss already paid before discovery is in opening cash; do not deduct the USD 2.3bn headline loss again.

Stress: first buffer breach 30 Nov; peak need $176m

COMBINED STRESS INPUTS · USDm

−$50m	Settlement accelerated / increased on 30 Nov
−$100m	October collateral return delayed past horizon
−$100m	Additional customer withdrawals on 30 Nov
−$50m	Maturing funding not renewed on 30 Nov

CALCULATED LIQUIDITY RESULT

Base case: $0m funding gap

Stress case: $549m at 30 Nov
First breach: 30 Nov, $151m below buffer
14 Dec cash: $524m; peak need: $176m

FUNDING TIMING & FALLBACK

Assume a $200m committed line with T+2 access. Trigger by 25 Nov → funds arrive by 29 Nov, before breach. If delayed beyond 30 Nov, use a separately verified fallback and conserve discretionary cash.

Sensitivity outputs: lowest cash · first breach date · peak funding need · source arrival versus breach. Re-run for each shock separately and in combination.

Base case has no gap; the illustrative stress needs $176m. All cash inputs and the $200m facility are assumptions—not UBS historical data.

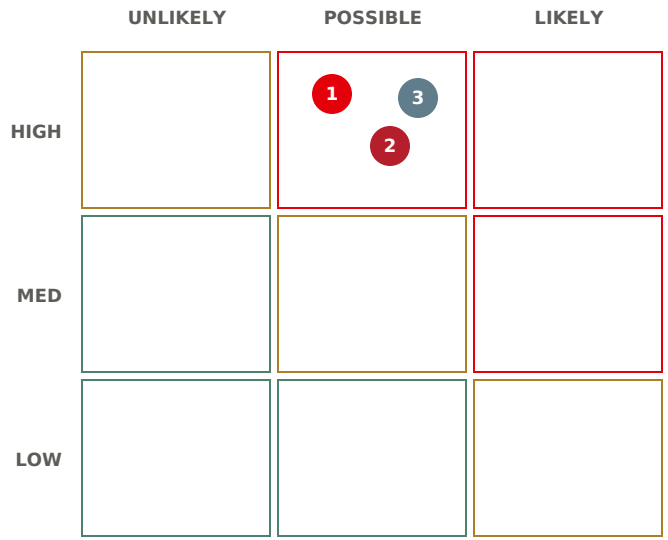

Stress outputs are calculated from labelled assumptions only; the facility is not claimed as an actual UBS commitment.

Risk register: score residual exposure after containment

RISK REGISTER · LIKELIHOOD × IMPACT = SCORE

P1 Operational	Unreconciled breaks could hide open positions	2×3=6
P2 Liquidity	Settlement / collateral peak versus buffer	2×3=6
Market	Price move before remaining positions close	2×2=4
Counterparty	Collateral return / receivable delayed	2×2=4
P3 Funding	Maturity in horizon may not roll	2×3=6
Reputational	Outflows / tighter terms in confidence stress	1×2=2
Legal / regulatory	Investigation + remediation cash timing	2×2=4

3 × 3 PRIORITY MATRIX

Impact: 1 headroom erosion <25% of approved buffer; 2 ≥25%, no breach; 3 cash below buffer

Likelihood 1–3 = unlikely / possible / likely within horizon; 25% is a proposed scoring cutoff, not UBS policy. Priorities: residual exposure, settlement / collateral breach, funding rollover.

Scores are analyst assumptions—not UBS / regulator ratings. Re-score after close-out; judge residual exposure only.

Three CFO actions link control, liquidity and execution

1 · IMMEDIATE LIQUIDITY PROTECTION

Owner: Group Treasurer | Deadline: initial view in 24h; funding before first modeled breach.

Benefit: measured headroom uplift = confirmed accessible funding less fees / haircuts.

Constraint: availability, collateral eligibility, execution time and cost.

Fallback: separately assessed resource available within the required window.

2 · CONTAIN CASH EXPOSURE

Owner: IB COO + Market Risk + Treasury | Deadline: immediate; daily until reconciled / closed.

Benefit: reduce uncertainty; count collateral release only when confirmed.

Constraint: market liquidity, close-out cost and settlement delays.

Fallback: retain a conservative liquidity overlay against unresolved items.

3 · REBUILD CONTROLS & GOVERNANCE

Owner: CRO + IB COO; Internal Audit validates | Interim days; programme by 14 Dec.

Benefit: reduce recurrence; no unsupported cash-saving estimate.

Constraint: systems, staffing, implementation and ownership.

Fallback: manual independent verification, dual sign-off and tighter limits.

Proposed actions; quantify cash benefit from internal data, do not invent amounts.

Board decision: protect payment capacity; activate funding only on evidence

Authorize a verified 13-week cash forecast, independent position reconciliation and a pre-arranged funding fallback. Do not equate the USD 2.3bn accounting / trading loss with a same-day cash requirement.

DAILY · FIRST WEEK	Accessible cash and buffer · settlement / collateral due · open breaks
WEEKLY · TO 14 DEC	Funding maturities · forecast variance · withdrawals / counterparties
ESCALATE IF	Forecast cash below buffer before funding arrives; unresolved material trade; missed collateral return or rollover

DIRECT ANSWER & MODEL LIMITATION

The response is a timing-led liquidity plan: preserve headroom, contain and reconcile positions, and stage funding before any modeled breach. Public sources confirm the incident, but not opening accessible cash, daily flows, the minimum buffer or the actual peak funding requirement/date; those require UBS Treasury records.

If the internal base case shows no funding gap, report zero; disclose the stress assumptions that would create one.

Appendix · model inputs, calculation rules and data gaps

INPUT REGISTER

Opening accessible cash by entity / currency
Maturity-date receipts and payments
Incident settlements by value date
Collateral calls / returns, net of duplicates
Remediation invoices; policy buffer
Committed funding, lead time and conditions

CALCULATION RULES

Closing cash before funding = opening + receipts − payments
Incident case adds $-S_t + K_t - I_t$
Funding gap = max(0, buffer − closing before funding)
Closing after funding = closing before + confirmed funding
Carry each period close into next period
Report lowest cash, breach date and peak gap

EVIDENCE & LIMITS

Published: loss / dates / positions / control findings
Derived: disclosed CHF / USD accounting reconciliation
Assumed: cash opening, flows, buffer, FX and stress timing
No WCR / CCC proxy for bank liquidity
No actual gap until internal ledger is loaded
Use explicit FX source and date for each translation

Supporting calculations should report the model version, as-of time, owner, data source and scenario label.

Use internal Treasury, settlement, collateral and risk records to populate this template; retain source / timestamp for every input.

Appendix · illustrative daily and monthly cash bridge

Opening cash $1,000m · buffer $700m · first-week baseline payments $621m · closes shown before additional funding

PERIOD	BASE RECEIPTS	BASE PAYMENTS	INCIDENT SETTLEMENT	INCIDENT COLLATERAL[1]	INCIDENT COSTS	NO-INCIDENT CLOSE	INCIDENT BASE CLOSE
14 Sep · open	—	—	—	—	—	**1,000**	**1,000**
15 Sep	120	130	55	−20	0	990	915
16 Sep	90	95	80	−25	0	985	805
17 Sep	110	105	45	+10	0	990	775
18 Sep	100	105	20	+15	0	985	765
19 Sep	90	88	5	+10	0	987	772
20 Sep	95	98	15	+20	0	984	774
21–30 Sep	500	480	50	+30	5	1,004	769
October	1,800	1,700	50	+100	10	1,104	909
November	1,600	1,650	20	+20	10	1,054	849
1–14 Dec	800	830	0	+10	5	1,024	824

[1] K_t is incremental and signed: collateral release +, call −. Baseline receipts include scheduled funding. Do not count cash settlement again as the published USD 2.3bn loss.

Stress shocks and facility timing are shown on slide 8; replace all assumed inputs with dated internal records.
