MASTER THESIS DEADLINES

MSc SPRING 2026 INTAKE

SPRING 2026 INTAKE

Deadline	Action	Comments	Assessment
30/11/2026 at 10:00 am at the latest French time	When it is time to start your Master Thesis project, you will receive an email with practical details. It will enable you to register the name of your Master Thesis partner, your proposed supervisor, and your proposed subject according to preliminary discussions with the proposed supervisor. ONLY ONE application must be completed by pair. **Spring intake students are not allowed to pair with Fall intake students and will be presented to the July Jury.**	It is your responsibility to find a Master Thesis partner. We encourage interdisciplinary approaches and therefore finding a Master Thesis partner in another MSc programme. You will find a dedicated forum on K2 (http://k2.skema.edu) to help you find a Master Thesis partner. As a pair it is your responsibility to find a supervisor from the list provided on K2 (http://k2.skema.edu). As a pair it is your job to convince the supervisor of the quality of your project and your commitment to the process. A priority list of supervisors will be available on the platform. Choosing supervisors from this list will accelerate the allocation process. External supervisors, who are not registered on the K2 list, are allowed once permission has been received. Your demand may be accepted **or rejected**. In all cases, you will be allocated a supervisor at the end of the designated time period. Choosing a supervisor who is not in the K2 list may slowdown the allocation process and there is no guarantee the proposed external supervisor will be accepted.	You must complete it even if you have not managed to find a supervisor and/or a Master Thesis partner. If you do not fill in the Master Thesis form by the deadline, a 2 mark penalty could be applied. In all cases, you will be allocated a Master Thesis partner and/or a supervisor by end of January.

		The Master Thesis must be carried out in pairs. Therefore the quantity of work implied by your research question and your data requirements and analysis must be sufficient to justify the need for two students on the project. You will also be responsible for organizing your work together (you cannot expect your supervisor to allocate tasks or to intervene in cases of disagreement between you).	
10/02/2027	Student sends literature review (and "Context" in case of a Business plan) to supervisor	The literature review should be comprehensive and in a form which could be included in the final Master Thesis. It should be between 15 and 20 pages long. Hypothesis development should be included here (if appropriate). In case of a Business plan, literature review should not exceed 15 pages. Context of the project should also be provided.	Grade out of 20 contributing towards continuous assessment grade
07/04/2027	Student sends a preliminary draft of the Master Thesis to supervisor	The preliminary draft should contain an updated literature review, details of data collection and methods. Finally it should provide results and analysis.	Grade out of 20 contributing towards continuous assessment grade
24/05/2027 at 10:00 am at the latest French time	Student submits final document Only one student per pair must submit the document.	Master Thesis will be checked for plagiarism and AI usage analysis. If plagiarism or inappropriate use of AI is confirmed an F grade will be given. If no Master Thesis document is submitted by the deadline, an F grade will be given without prejudice to measures that may be subsequently	Grade out of 20 for the complete written document

	All information about Master Thesis submission is available on K2 (emailing address to be used, etc…)	taken by the administration of SKEMA Business School following such cases as stated in our internal regulations (article 23). **A defense is requested by the 7th of June 2027.**	
24/05/2027	Student and supervisor agree on a day for the Master Thesis defense		
07/06/2027	Deadline for defense		

We wish you every success in your Master Thesis
