

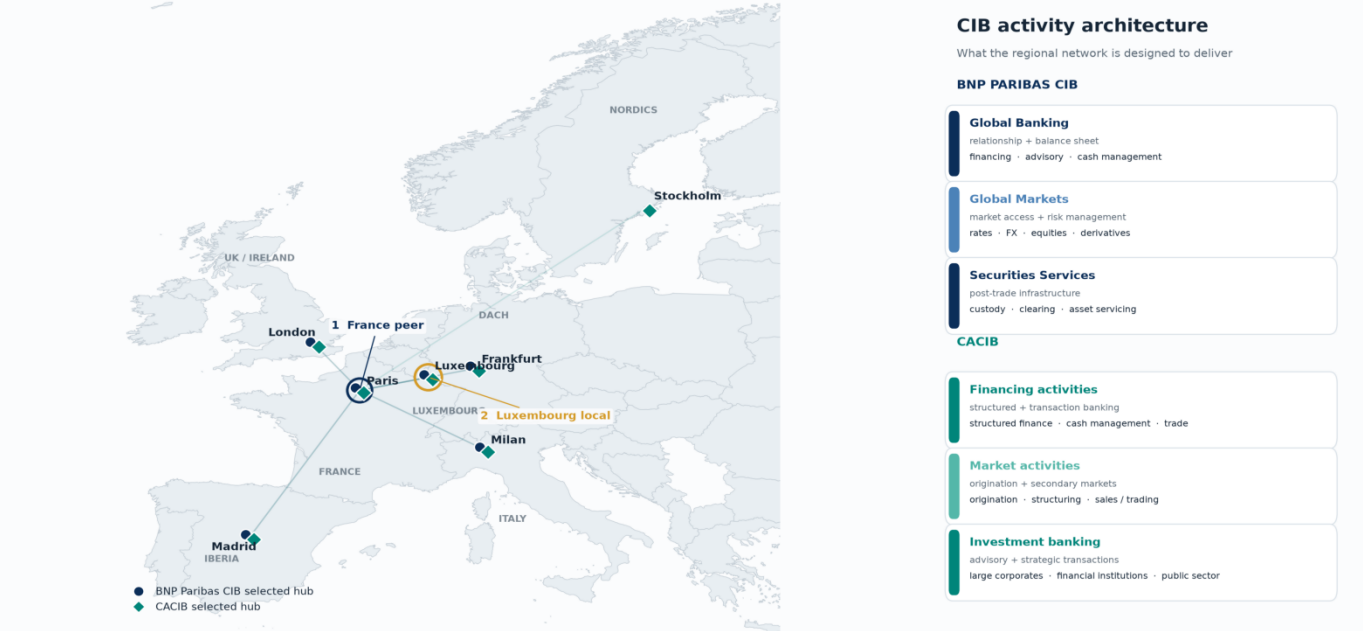

Figure 1. European CIB footprint and platform architecture

Report-ready figure · public sources · illustrative perimeter

European CIB footprint — one platform, several regional engines

BNP Paribas and CACIB | selected public hubs + CIB activity architecture

Sources: BNP Paribas CIB at a glance / EMEA pages; CACIB 2025 activity report; selected hub sources in data/europe_hubs_public.csv. City dots show selected hubs, not line-by-line legal booking.

HOW TO READ THE FIGURE

This figure introduces the geographic and business architecture of the comparison. It combines selected publicly documented hubs for BNP Paribas CIB and CACIB with the main activity engines shown in public business-line materials.

- Dots and city labels represent selected public hub signals, not an exhaustive legal-entity footprint.
- The right-hand architecture separates financing, markets and securities services; it is a capability map rather than a revenue chart.
- Links and highlighted nodes are directional reading aids only; they do not represent transaction volumes, revenue or booking location.

EXECUTIVE TAKEAWAY

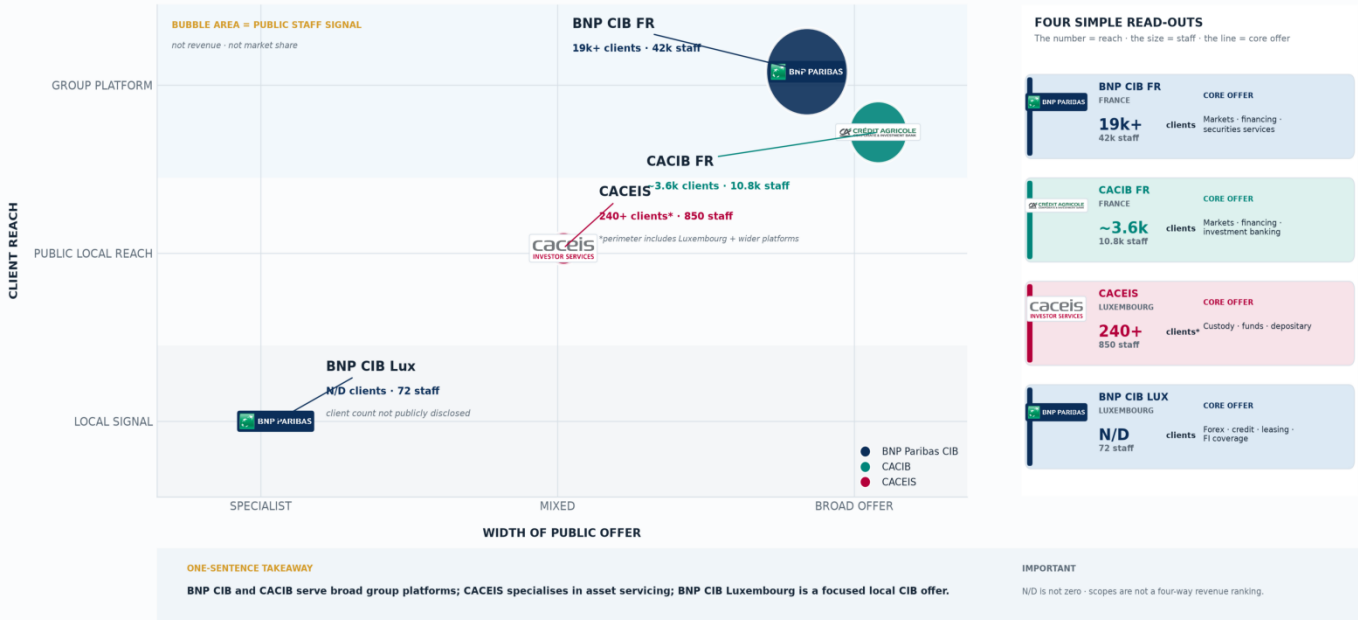

The European platform is connected, but Paris and Luxembourg must remain separate in the next comparison because the public sources do not evidence identical local perimeters.

Figure 2. Four franchises: client reach, offer breadth and operating weight

Report-ready figure · public sources · illustrative perimeter

Four franchises — who they serve and what they offer

Read the chart in 20 seconds: left → right = offer breadth · up = public reach · bubble size = operating weight.

Sources: BNP CIB at a glance / 2026 At a Glance; CACIB 2025 key figures; BNP Paribas Luxembourg CIB page; CACEIS Luxembourg Investor Services report. See data/four_brand_bubble_metrics.csv.

HOW TO READ THE FIGURE

This executive bubble chart focuses the comparison on four anchors: BNP CIB France, CACIB France, CACEIS Luxembourg and BNP CIB Luxembourg.

- Left to right means a narrower or broader publicly named offer; this is a qualitative positioning axis, not a performance score.
- The vertical bands distinguish a local signal, public local reach and a group platform; the large labels retain the public client signal where it exists.
- Bubble size uses public staff signals as a visual proxy for operating weight; N/D means that the local client count is not publicly disclosed. Neither is revenue, assets, market share or client value.

EXECUTIVE TAKEAWAY

BNP CIB and CACIB read as broad group platforms; CACEIS reads as specialised asset servicing; BNP CIB Luxembourg reads as a focused local CIB offer.
